

Giving the
Cloud a Voice

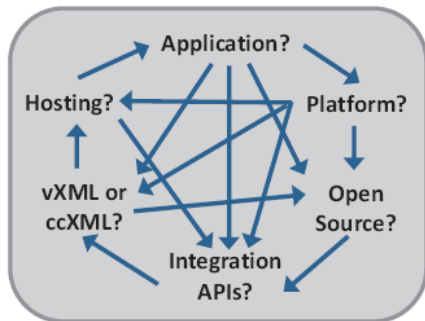

Phonologies

Got an Idea?

Where do I start?

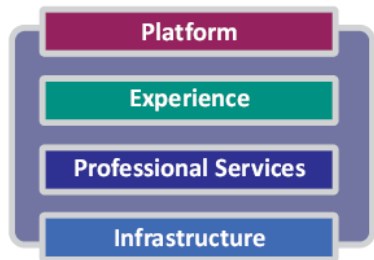

Too Complicated?

Let Phonologies help you

Enhance Business Processes

▶ Phonologies 'voice enables' business processes by providing a robust application delivery platform in the cloud or in your network. The platform serves as a foundation to deliver applications such as, messaging, unified communications & collaboration, web telephony and other applications in the social media, contact center and other enterprise domains.

Our platform is extremely cost effective, flexible in architecture, easy to manage and interface with, considerably reducing your time to market. It can be deployed in modular components for OEM. Phonologies Professional Services team will guide and assist you during the entire deployment process.

▶ **Platform Features:** Phonologies offers a fully featured voice platform for applications with sophisticated interfaces to enhance user interaction and communication. Phonologies platform implements all current industry standards for speech, telephony and web services.

 **Experience and Professional Services:** We are a highly specialized and experienced team, having built a range of platforms and applications for virtually every vertical in the speech and telephony business. Expertise in providing platform engineering and integration support, design consulting and 'prototyping', application development and 3rd party system integration services – all built around Phonologies platforms.

Phonologies offers a broad spectrum of business, technical and operational consulting services in the area of modern voice applications and platforms. A Dedicated Team supports you during the entire application life cycle.

 **Infrastructure:** Phonologies Technology Development Lab (TDL) setup in Hyderabad, India, is a state-of-the-art development and delivery centre housing Phonologies platform engineering and applications development teams. Phonologies TDL has produced platforms for premise based telephony systems (including embedded CPEs) and is now actively executing customer projects to migrate parts of business process to the cloud in a cost efficient manner.

Differentiators:

- Availability of robust and cost effective voice platform and applications for cloud deployment
- Experts in voice enabling business processes
- Infrastructure setup and support teams in place
- Focus on customer business goals
- Flexible engagement models
- Transparent working relationship
